Earth
Bridge

EarthBridge is a three-year project starting in January 2023 and lasting 36 months. Project ID: 101079310. Project is financed by the European Union under the call HORIZON-WIDERA-2021-ACCESS-03

EarthBridge aims to develop and further improve environmental EO tools that are robust, transferable, and applicable across disciplines and landscapes. The project brings together EO and environmental sciences expertise to bridge the existing gaps between these two disciplines at educational, practical, and governmental levels.

Project activities are grouped into five work packages (WPs), will ensure knowledge transfer and exchange by developing new methods and training new professionals in environmental EO.

EarthBridge is focused on the development and application of methods for monitoring, restoration, and conservation of biodiversity in agricultural landscapes

EarthBridge enables the twinning of the Czech University of Life Sciences Prague (CZU), Technische Universität Dresden (TUD) and Alma Mater Studiorum - Università di Bologna (UNIBO) and Universität Bonn.
