# Earth Bridge

Building Bridges between  
Earth observation and  
Environmental Sciences

**EarthBridge** is a three-year project starting in January 2023 and lasting 36 months. Project ID: 101079310. Project is financed by the European Union under the call HORIZON-WIDERA-2021-ACCESS-03

**EarthBridge** aims to develop and further improve environmental EO tools that are robust, transferable, and applicable across disciplines and landscapes. The project brings together EO and environmental sciences expertise to bridge the existing gaps between these two disciplines at educational, practical, and governmental levels.

Project activities are grouped into five work packages (WPs), will ensure knowledge transfer and exchange by developing new methods and training new professionals in environmental EO.

**EarthBridge** is focused on the development and application of methods for monitoring, restoration, and conservation of biodiversity in agricultural landscapes.

EarthBridge enables the twinning of the Czech University of Life Sciences Prague (CZU), Technische Universität Dresden (TUD) and Alma Mater Studiorum - Università di Bologna (UNIBO) and Universität Bonn.
